

SAFE PAIN MEDICINE PRESCRIBING IN EMERGENCY DEPARTMENTS

- We care about you. We are committed to treating you safely.
- Pain relief treatment can be complicated. Mistakes or abuse of pain medicine can cause serious health problems and even death.
- Our emergency department is committed to providing safe pain relief options. Many types of pain can be safely and effectively managed without prescription medications.

For your SAFETY, we follow these rules when treating your pain:

1. We look for and treat emergencies. We use our best judgment when treating pain. These recommendations follow legal and ethical advice.
2. You should have only one provider and one pharmacy helping you with chronic pain. We do not usually prescribe pain medication if you already receive pain medicine from another health care provider.
3. If prescription pain medication is needed, we generally only give you a small amount.
4. We do not refill lost or stolen prescriptions. If your prescription is stolen, please contact the police.
5. We do not prescribe long-acting pain medicines: OxyContin, MSContin, Fentanyl (Duragesic), Methadone, Opana ER, Exalgo and others.
6. We do not provide missing doses of Subutex, Suboxone, or Methadone.
7. We do not usually give shots for flare-ups of chronic pain. Medicines taken by mouth may be offered instead.
8. Health care laws, including HIPAA, allow us to ask for your medical records. These laws allow us to share information with other health care providers who are treating you.
9. We may ask you to show a photo ID when you receive a prescription for pain medicines.
10. We use the California Prescription Drug Monitoring Program, called CURES. This statewide computer system tracks narcotic and other controlled substance prescriptions.

If you need help with
substance abuse or addiction, call
