Planning Department at 555 Main Street, Quincy, CA 95971

The project scoping will identify mitigation activities to protect critical water services and water security functions and enhance resilience against current and future risks to the Round Valley Reservoir, Greenville, caused by recurring wildfires, increased flooding and erosional risks, and the expanding impacts of drought and climate change, and seeks to advance comprehensive planning, technical analyses, and stakeholder engagement to address infrastructure failure including its water supply and conveyance infrastructure, landslide/debris flow, and drought risks.

The types of activities explored will include enhancing reservoir capacity, stabilizing banks, and reducing sedimentation to combat drought.

The project scoping outcome will be the selection and conceptual design of the preferred and most effective mitigation strategy, focusing on climate resilience, future conditions, current site conditions, geotechnical investigations, stakeholder engagement, and partnership building.
